ADHD PGX PANEL

DESCRIPTION

This test analyzes 13 different genes associated with how well an individual will respond to any of the medications commonly prescribed to treat all the various symptoms of ADHD.

ADHD may identify which stimulant medication is likely to be the most effective, which ones are less likely to work, as well as which ones are more likely to cause side effects.

WHY DO I NEED THIS TEST?

Genetic testing has potential benefits whether the results are positive or negative for a gene mutation. Test results can provide a sense of relief from uncertainty and help people make informed decisions about managing their health care. For example, a negative result can eliminate the need for unnecessary checkups and screening tests in some cases. A positive result can direct a person toward available prevention, monitoring, and treatment options. Some test results can also help people make decisions about having children.

HOW LONG WILL IT TAKE TO GET MY LAB TEST RESULTS?

Test results generally takes between 5-7 business days after your sample has been received by the lab.

AM I REQUIRED TO FAST FOR THIS LAB TEST?

No, fasting is not required for this test.
